- Must be used with the Contractor metal extension wands (90305).
- Use for dry pick up in conjunction with the 14 in. (35.6 cm) Contractor metal master nozzle (90641).

9062400 14 in. (35.6 cm) Contractor Squeegee Insert
- Provides longer reach for easier cleaning.
- Use for wet pick up in conjunction with the 14 in. (35.6 cm) Contractor metal master nozzle (90641).

8019500 Metal Accessory Kit
- Includes: 2 extension wands, round brush, crevice tool, adapter (polypropylene) and 14 in. (35.6 cm) master nozzle with single blade squeegee, rug and brush shoes.

9190010 Industrial / Commercial Cleaning Kit
- Includes: 2 metal extension wands, polypropylene round brush, polypropylene crevice tool, polypropylene 6 in. (15.2 cm) master nozzle, polypropylene adapter and polypropylene 14 in. (35.6 cm) master nozzle with rug, brush and squeegee shoes.

9065300 14 in. (35.6 cm) Contractor Brush Insert
- Provides longer reach for easier cleaning.
- Use for dry pick up in conjunction with the 14 in. (35.6 cm) Contractor metal master nozzle (90641).

SHOP-VAC® CORPORATION is the recognized world leader in wet/dry vats. While that leadership position was earned first when there were no other manufacturers of wet/dry vats, we have maintained worldwide respect for more than 50 years by continuing to innovate and advance the technology of wet/dry vats.

Every one of our products is manufactured to meet our high standards and our customers’ high expectations. To ensure that we meet your expectations, we find it helpful to explain the terminology that is used to classify our vats.

OUR RESEARCH, ENGINEERING AND MANUFACTURING STANDARDS are second to none. In fact, our continuous product improvement program guides our process. Because of that, the specifications listed in this brochure are subject to change without notice. If you have questions about any of our products, please call our customer service department at 1-570-326-3557.

Shop-Vac® Corporation offers the most complete line of vacuum cleaners available for industrial and commercial applications, plus a wide range of accessories that are specifically designed to meet the heavy-duty cleaning needs of the sanitary maintenance professional.

TERMINOLOGY

**Horsepower Rating**
Peak horsepower is the maximum output horsepower of a motor determined from a laboratory dynamometer test. Since peak horsepower is outside the normal operating range of a vacuum cleaner, it may not be indicative of actual air power differences when comparing two cleaners.

**Motor Types**

**Single-Stage By-Pass Motor**
(One vacuum fan)
Single stage motors use just one vacuum impeller to produce a moderate suction pressure (sealed pressure) at a relatively high airflow (CFM) creating a vacuum performance level suitable for home, workshop, and light industrial cleaning applications.

**Two-Stage By-Pass Motor**
(Two vacuum fans)
Two-stage motors use two vacuum impellers in series which produce a significantly higher suction pressure (sealed pressure) creating a vacuum performance level appropriate for industrial and commercial maintenance applications. Two-stage motors typically operate at lower speeds resulting in longer motor life and quieter operation.

**Switch Reluctance (SR) Motor Design**
A Switch Reluctance Design is an innovative brushless motor that yields over 5000 hours of life. This construction is controlled by Solid State electronics that monitors the motor performance. The rotor or turning member of the motor is all metal, and has no windings or commutator that could be damaged by centrifugal force generated by high speeds. These motors deliver high performance characteristics in a Wet/Dry Vacuum Cleaner with minimal components to fail during normal operation.
SP (Sealed Pressure)
Suction pressure represents how far up a glass tube a vacuum motor will lift a column of water. This function is measured in inches. Maximum suction pressure or sealed water lift is obtained at zero air flow. Suction pressure decreases as air flow increases.

CFM (Cubic Feet Per Minute)
CFM is a measure of the quantity of air moved by the vacuum motor at a particular system load, such as 2-1/2” orifice. Your actual system load is determined by the type, size and length of the hose used, the accessory tool used and the filter system used. A dirty filter system can drastically affect the suction and air flow. The filters need to be cleaned regularly and replaced as necessary to avoid reduced suction and air flow.

Vacuum Performance
Vacuum performance or air power is the rate of work performed by a vacuum cleaner. Air power is a function of suction and air flow at an operating point. Air power is reduced by dirty filters, leaks and the attachments used.

Double Filtration
A double-filtration system for dry vacuum applications provides optimum performance and clean exhaust air. Double-filtration systems are available for most Shop-Vac® Industrial and commercial vacuums and is standard on many models. The large area and high-efficiency primary filter captures dirt, dust and airborne particles while allowing superior airflow. The secondary filter media filters out additional particles and acts as a back-up to the primary filter.

A WORD ON SAFETY
All Shop-Vac® vacuum cleaner products listed in this catalog have been tested by Underwriters’ Laboratories, Inc. and are listed by their testing laboratories as having complied with the strict UL® standards for safety.

A user manual is furnished with each Shop-Vac® vacuum cleaner. Please read it carefully for optimum product performance. It is especially important to review all safety rules and warnings before operating the vacuum cleaner.

SHOP-VAC® INDUSTRIAL WARRANTY
Shop-Vac Corporation warrants its industrial and commercial vacuum cleaners for one year from date of purchase to correct by repair or parts replacement without charge any product defect due to faulty material or workmanship provided the vacuum cleaner is not used for rental service. This warranty does not cover accessories. Customers in the United States: simply return the head assembly (transportation prepaid) to: Attn: Service Center • Shop-Vac Corporation • 2323 Reach Road • Williamsport, PA 17701. Customers in Canada: simply return the complete unit (transportation prepaid) to the Authorized Shop-Vac® Service Center nearest you (a complete list of Authorized Service Centers is included with each vacuum cleaner).
